BD-6K™

Knapp's Tough Pipeline Pig with The Precision-Tuned Discs

Accept no substitutes

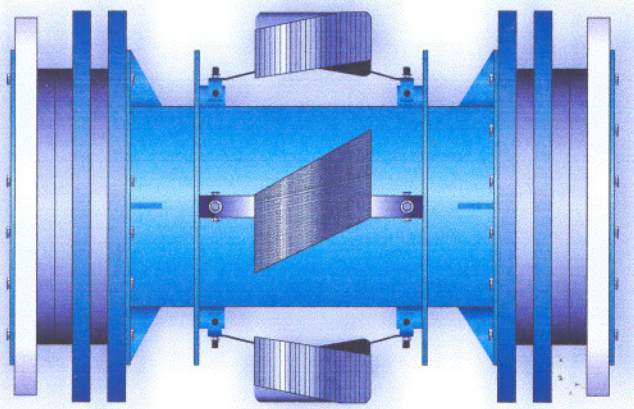
To insure unparalleled quality, the BD-6K pig is manufactured exclusively by Knapp Polly Pig in Houston, Texas, USA; Monterrey, Mexico; and the Republic of Singapore.

Line Sized Guide Discs

The outside diameter of the guide discs match the inside diameter of the pipe being cleaned in order to present a straight edge against the pipewall for superior cleaning.

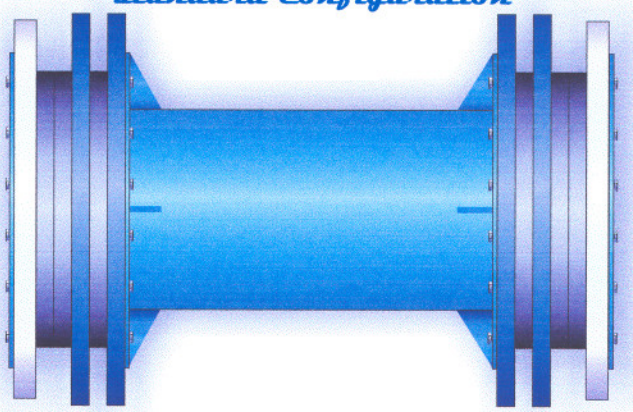
Over-Sized Seal Discs

The outside diameter of the seal discs are slightly larger than the inside diameter of the pipe to insure a good seal required to propel the pig through the line.



Knapp BD-6K with Spring-loaded brushes

Knapp BD-6K standard configuration



Tuned Polyurethane Discs

The BD-6K guide discs are manufactured with a tough, hard polyurethane elastomer to provide the pig with a superior scraping ability. The seal discs are thinner and made of a softer, more flexible polyurethane that conforms to the pipe wall for maximum sealing.

Mounting Dimensions For All Mandrel-Type Pigs

The center mounting hole, bolt hole circle, number and size of bolt holes as well as the thickness of the individual discs are variable to allow the discs to be fitted as replacement discs on any manufacturer's mandrel-type pig.

Available in Ultrathane™, the ultra performance urethane

The replacement discs for the BD-6K are available in a variety of custom-blended, high strength, long-wearing urethane formulations known as UltraThane™. The exact formulation is determined by the function that the pig is to perform, the length of the run and other job specific criteria.

BD-6K and Ultrathane are Registered Trademarks of Knapp Polly Pig, Inc.
